Happy Friday Carrie:

I noticed a few errors in the EPA Submittal Table which I've highlighted on the attached version. Mostly wording consistency stuff like if it was determined something wasn't impaired there shouldn't be anything in the "Pollutant for which TMDL has been prepared" column.

Also, it seems that the nonpoint source loads for some nutrient TMDLs were slightly off. My corrected numbers came from adding up those individual loads in the Section 6.6.3 tables, which then gets you to the correct total load (TMDL). I also changed it so all loads are on their own row for readability.

Probably a good idea to hold off on submitting an errata for a few weeks like you usually do, incase anything else comes up in the main document. I've also attached a clean/corrected version that I re-titled Enclosure 1 and sent off to Denver.

Let me know if you have any questions or disagree with any of my corrections.

Thanks!
